Hospital Management System

The Hospital Management System is a computer based management information system. This application has been developed for managing whole records of hospital including doctor, patient, billing, service, medicine etc. Room allocation is also managed by this web application. This software will handle all these above records. This is web based project developed in asp.net and SQL server.

In this project both: inpatient and outpatient are managed. Outpatients are those patients who often visit hospital for check-up or any OPD service. These patients have separate section in the software. Inpatient refers to those patients who are admitting in the hospital for treatment. These patients have separate module. It includes room allocation, medicine and service details.

Modules:

1. Login
2. Change password
3. Doctor master
4. Employee master
5. Medicine master
6. Service master
7. Department master
8. Word master
9. Room master
10. Feedback
11. Doctor report
12. Department report
13. Service report
14. Ward report
15. Room report
16. Medicine report
17. Patient registration
18. Medical treatment
19. Service treatment
20. Billing
21. Discharge patient
22. Outdoor patient

23. Add medical treatment

Minimum Software Requirements:

- Windows 7
- Sql 2008
- Visual studio 2010

Minimum Hardware Components:

- Processor – Dual Core
- Hard Disk – 50 GB
- Memory – 1GB RAM

Advantages:

- **Easy retrieval of data:** This system uses SQL database so data can be easily and quickly accessed using sql commands.
- **Security:** This system provides very strong security. Every customer has unique user id and password. No one can access account without knowing correct password.
- **Large memory space:** This system can store a large number of customer records. System does not slowdown in data processing.
- **Easy interface:** GUI of the application is kept very simple. Any customer having very little knowledge of operating windows based system can operate this application very easily without any help.

Application:

Hospital Management System is a web based project implemented in Asp.Net and SQL Server. This project helps hospital administration to manage all records of hospital. This project keeps track of records like doctors, wards, room allocation, inpatient record, outpatient record, service and medicine given to the patients and billing.
