# Insurance Management System

Insurance management system project deals with insurance record maintenance. This online application helps employees to maintain insurance records digitally. The existing process of insurance record management system is manual. This system is prone to error. It is very time consuming process and take too long time to generate report. The proposed Insurance management system will eliminate all the drawbacks of existing system.

## **Modules:**

1. Login
2. Forget password
3. City master
4. State master
5. Policy master
6. Branch master
7. Agent master
8. Customer registration
9. Health history
10. Premium payment
11. Agent report
12. Policy report
13. Customer report
14. Premium report
15. Branch report
16. Customer inquiry report
17. Contact us
18. Inquiry

## **Minimum Software Requirements:**

- Windows 7
- Sql 2008
- Visual studio 2010

### **Minimum Hardware Components:**

- Processor – Dual Core
- Hard Disk – 50 GB
- Memory – 1GB RAM

### **Advantages:**

- This is a computerized system it will eliminate all the drawback of the manual system.
- This is a web based application. It uses a centralized database. So every user of the system always get the updated data and report.
- User can also keep tracking of premium payment details.
- All agent information can also be maintained in this application.

### **Application:**

The Insurance management system automates the activities of insurance agency. This application is developed in asp.net with vb programming language. For database we have used SQL server. It protects data from any authorized access. Every user of this application has a unique id and password. This is a general web application for insurance agency management. It keeps record of branch, agent, policy, customer, premium payment record and customer's health history. This system also generates various reports necessary for an insurance agency for decision making.
